

Diesel Fuel Injection Delivery Valve

This delivery valve is designed for optimal fuel delivery in diesel engines. It ensures accurate metering and timing, which contributes to efficient combustion and reduced emissions.

Product Overview

Precision Diesel Fuel Delivery

This precision-engineered delivery valve is designed to ensure optimal fuel delivery and timing in diesel engines. Constructed from high-quality hardened steel, it offers exceptional durability and wear resistance under demanding operating conditions. The valve features a multi-stage pressure relief system that minimizes pressure fluctuations, ensuring precise fuel metering for improved engine efficiency and reduced emissions.

Technical Specifications

System Compatibility

Common Rail • Diesel Injection

Compatible Part Numbers

1W6987, 4P7688, 09A, 59A

Material

Hardened Steel

Performance Features

Performance Benefits

- Accurate fuel metering
- Optimized injection timing
- Reduced pressure fluctuations
- Improved fuel efficiency
- Reduced emissions
