

Diesel Locomotive for Shunting and Main-line Operations

This heavy-duty locomotive is designed for shunting and mainline operations. The robust diesel engine provides high tractive effort and reliable performance.

Overview

Robust Performance for Diverse Rail Operations

The SDD4 is a heavy-duty diesel locomotive engineered for high-performance shunting and mainline operations. It integrates a powerful, durable engine with advanced control systems to deliver superior tractive effort. Designed for demanding industrial environments, this locomotive ensures reliable and safe transport in various rail applications.
