

Digital Body Fat Scale with LCD Display

This digital body fat scale is designed for personal health monitoring. It measures body weight and estimates body fat percentage using bioelectrical impedance analysis (BIA).

Product Overview

Precision Health Monitoring

This digital body fat scale is designed for efficient personal health tracking, utilizing bioelectrical impedance analysis (BIA) to estimate body fat percentage alongside body weight. Featuring a clear digital LCD display, it ensures measurements are easy to read and monitor. Built for reliability and consistency, this scale is an essential tool for users looking to track their fitness progress accurately.

Technical Specifications

Maximum Capacity

150 kg

Max Weight

Graduation/Precision

100 g

Measurement Technology

BIA, Digital

Features

Display Type

LCD

Power Source

Standard Batteries
