

Digital Cable TV Receiver with Data Broadcasting

This digital cable television receiver decodes and outputs digital cable signals for television viewing. The device supports integrated data broadcasting and stock systems to provide news, weather, advertising, games and education data services.

Overview

Professional Digital Cable Solution

This Digital Cable TV Receiver is fully compliant with DVB-C and MPEG-2 standards, offering a robust solution for high-quality television signal decoding. It features an integrated licensing management system and supports advanced data broadcasting services including news, weather, and educational content. Designed for versatility, it includes comprehensive parental controls, electronic program guides, and digital audio output for an enhanced viewing experience.
