

Digital Generator Stator Assembly

This digital generator component features a robust stator assembly with multiple copper windings for efficient power generation. It is designed for use in electric power generation systems.

Overview

High-Performance Stator Assembly

This digital generator stator assembly is engineered for reliable and efficient power generation in 1.2kW to 3kW systems. Designed with a focus on high-quality power output, the unit features a compact and lightweight construction that simplifies installation and operation. Its robust design ensures consistent performance and minimal noise, making it an ideal component for demanding power generation applications.

Technical Specifications

Power Output Range

1.2 kW

Min Power

3 kW

Max Power

Rated Speed	5000 rpm
Rated Voltage	230V, 420V
Reference Number	105200350

Features

Key Benefits

- High quality power output
- Lightweight and compact design
- Low noise operation
- Easy to carry and install
