

Digital Programmable Timer with LCD Display

This digital programmable timer is designed for automated control of electrical devices. It features a clear LCD display for easy time reading and programming.

Product Overview

Automated Control Solution

This digital programmable timer is engineered for the automated control of electrical devices, offering robust flexibility for lighting, heating, and irrigation systems. It features a clear LCD display for straightforward programming and monitoring, alongside manual override functionality for immediate control. Designed for reliability, the unit includes a backup battery to ensure settings are preserved during power outages and is housed in a durable plastic casing suitable for indoor environments.

Technical Specifications

Installation	Easy installation with intuitive button controls
Housing Material	Durable plastic
Usage Environment	Indoor Use

Features & Functionality

Control Modes

ON • AUTO • OFF • Manual Override

Power Backup	Yes
Programming	Multiple on/off settings per day
