

Digital Satellite Receiver

This digital satellite receiver is fully compliant with DVB-S and MPEG-2 standards. It features automatic scanning, program storage, and software updates via RS-232.

Product Overview

Professional Digital Satellite Receiver

This versatile digital satellite receiver is fully compliant with DVB and MPEG-2 standards, ensuring high-quality broadcast reception. Designed for user convenience, it features plug-and-play installation, automatic program scanning, and high-sensitivity tuning for reliable performance. It supports a wide range of broadcast formats and offers advanced features like multi-language support, teletext, and zoom capabilities.

Technical Specifications

Performance Metrics

3000 Channels

Program Storage

800 Pages
