

Digital Satellite TS Stream Transcoder

The digital satellite TS stream transcoder is designed for professional audio-video applications. This device converts and processes transport streams from satellite transmissions, ensuring compatibility and optimal performance in various broadcasting and streaming environments.

Overview

Professional TS Stream Transcoder

The JTS638 is a professional-grade digital satellite TS stream transcoder engineered for high-performance audio-video broadcasting applications. It provides seamless conversion and processing of transport streams, ensuring broad compatibility across complex streaming environments. With its robust architecture and integrated control interface, it offers reliable signal management for demanding professional installations.

Technical Specifications

Core Features

- Digital Satellite TS stream conversion
- Multi-channel signal processing
- Real-time signal locking indicator
- User-friendly menu-driven control

Build Quality

Professional Grade • Robust Design

Signal Inputs

4 ports

Interface

LCD Display, Physical Control Buttons
