

Digital Satellite TV Receiver

This digital satellite receiver is engineered for receiving digital satellite television and radio signals. The device supports DVB standards and provides digital audio and video output.

Product Overview

Professional Satellite Reception

This digital satellite TV receiver is fully compliant with DVB-S (MPEG2) standards, ensuring reliable signal reception for home entertainment systems. It offers a high-capacity memory space capable of storing up to 5000 channels and 64 satellites. With a user-friendly interface and energy-efficient standby power consumption of less than 1W, it provides a seamless and cost-effective viewing experience.

Technical Specifications

Standby Power

1 W

Standby Power Consumption

Compliance	DVB-S, MPEG2
Max Channels	5000
Satellite Memory	64

User Experience

Key Features

- Multi-language OSD
- User-friendly UI
- Teletext support
- EPG support
