

Digital Terrestrial TV Receiver

This digital terrestrial receiver is designed to receive and decode digital television signals. It features a front panel display, power and menu buttons, and a navigation control pad.

Product Overview

High-Definition Digital Terrestrial Reception

The HDT3200 is a robust digital terrestrial receiver engineered to provide reliable signal decoding for high-definition television broadcasting. Housed in a durable silver metal casing with integrated ventilation for thermal management, it is designed for consistent performance in various professional setups. The intuitive front panel interface includes dedicated power and menu controls, alongside a navigation pad for streamlined operation.
