

Digital TV Headend Equipment for Signal Processing

This digital TV headend equipment is designed for signal processing and distribution. It features front panel controls and a display for easy operation.

Overview

Professional Digital Signal Processing

This digital TV headend equipment is designed for robust signal processing and distribution in professional broadcasting environments. Featuring a front-panel interface for real-time monitoring and control, it ensures reliable signal management for DVB networks. The unit is optimized for high-performance operation in complex television signal infrastructures.

Technical Specifications

Interface & Monitoring

- Integrated Front Panel Display
- Menu Navigation Controls
- System Alarm Indicator
- Lock Status Indicator
- Power Status Light
- Video Signal Indicator

Signal Standards	DVB
Model Identification	GC 1890D
