

Digital Video Broadcasting TV Component

Professional TV component designed for high-quality video processing and transmission. Features include a user-friendly interface with multiple control buttons and a clear display screen for easy monitoring.

Product Overview

High-Performance Video Processing

This professional video component is engineered for reliable signal processing and transmission in digital broadcasting environments. Designed for high-quality output, it integrates advanced DVB technology to ensure stable performance for demanding professional applications. The unit features an intuitive interface with precise controls and a clear monitoring display for efficient operation.

Technical Specifications

Broadcast Standard

DVB

Integrated Interfaces

- Video Input/Output
- Audio Input/Output
- Power Management

Model Identifier

DQ-3600II

System Monitoring

Yes
