

DIN 1479 Turnbuckle Body

This turnbuckle body conforms to DIN 1479 specifications. It adjusts tension in ropes, cables, and tie rods using threaded ends for secure fastening.

Product Overview

Versatile Tensioning Component

The DIN 1479 turnbuckle body is a precision-engineered component essential for adjusting the tension or length of ropes, cables, and tie rods. Constructed from durable metal, it is built to withstand rigorous use in demanding construction, rigging, and general engineering applications. Its threaded design ensures compatibility with various fastening hardware, allowing for precise tension management in diverse industrial systems.

Technical Specifications

Standard Compliance

DIN 1479

Core Functions

- Tension adjustment for cables and ropes
- Length fine-tuning for tie rods
- Compatibility with various fastening hardware

Material Composition

Durable Industrial Metal

Suitable Applications

Construction, Rigging, General Engineering
