

DIN 1480 Hook and Eye Turnbuckle

This turnbuckle adjusts the tension or length of tensioning systems. It features a hook on one end and an eye on the other for versatile connection options.

Overview

DIN 1480 Hook and Eye Turnbuckle

The DIN 1480 Hook and Eye Turnbuckle is a versatile tensioning device essential for adjusting the length and tension of ropes, cables, and tie rods. Featuring a hook on one end and an eye on the other, it allows for flexible connection configurations in various rigging and load-securing applications. Built to comply with DIN 1480 standards, this component is constructed from durable metal, providing the strength and corrosion resistance required for professional-grade reliability.

Technical Specifications

Standard
DIN 1480

Configuration

Hook and Eye

Material

Steel, Corrosion Resistant

Key Features

Primary Function

- Adjusting tension
- Adjusting length
- Secure load binding
- Versatile connection
