

DIN 580 Eye Screws

These DIN 580 eye screws are designed for lifting and securing applications. They are available in self-colored or electro-galvanized finishes for enhanced corrosion resistance.

Product Overview

DIN 580 Eye Screws

The DIN 580 eye screw is a critical component designed specifically for lifting and securing heavy loads in industrial and construction environments. Engineered to meet strict DIN 580 standards, this fastener ensures precise dimensional accuracy and reliable load-bearing capacity. Available in both self-colored and electro-galvanized finishes, it offers versatile options for corrosion resistance depending on your application needs.

Technical Specifications

Standard

DIN 580

Primary Applications

- Lifting applications
- Securing loads
- Industrial settings
- Construction projects

Thread Size

M16

Available Finishes

Self-colored, Electro-galvanized
