

# DIN 933 Hex Cap Screws

These hex cap screws are fully threaded bolts with a hexagonal head, designed for general purpose applications. They are manufactured from high-strength steel with a protective coating for corrosion resistance.

## ADDITIONAL IMAGES

## Product Overview

### DIN 933 Hex Cap Screws

These DIN 933 hex cap screws are precision-engineered, fully threaded bolts designed for reliable fastening across machinery, construction, and automotive industries. Manufactured from high-quality carbon and alloy steels, they offer exceptional strength and durability for demanding applications. With a wide range of available finishes and grades, these bolts provide versatile solutions for diverse structural and mechanical requirements.

## Technical Specifications

### Material

- Low carbon steel
- Alloy steel (35k, 45#, 40Cr, 35CrMoA, 42CrMoA)

### Available Grades

8.8 • 10.9 • 12.9

### Standards Compliance

DIN 933, ISO 4017, ANSI, ASME, BS, AS, JIS

## Dimensional Data

### Size Range

**8 M**

Min Diameter

**42 M**

Max Diameter

**6 mm**

Min Length

**420 mm**

Max Length

## Manufacturing & Logistics

|                        |   |
|------------------------|---|
| Surface Finish         | Plain, Black Oxidized, Zinc Plate, Hot Dip Galvanized, Chrome |
| Monthly Supply Ability | 800 tons  |
| Delivery Lead Time     | 7-30 days   |
