

DIN Bellow Seal Globe Valve

This bellow seal globe valve is designed for use in oil fields, chemical plants, and coal mines. It is suitable for controlling the flow of steam and hot oil.

Product Overview

DIN Bellow Seal Globe Valve

This DIN standard globe valve is engineered for demanding industrial applications requiring reliable leak prevention. Featuring robust cast steel construction, it is specifically designed to handle challenging media such as steam and hot oil. The integrated bellows seal technology ensures superior sealing performance, making it an ideal choice for critical fluid control systems.

Technical Specifications

Body Material	Cast Steel (WCB / GS-C25)
Nominal Diameter (DN)	50 mm
Nominal Pressure (PN)	16 bar

Features

Key Features	Bellow Seal, DIN Standard, Flanged Connection, Manual Operation
--------------	---

Applications

Suitable Media

- Steam
- Hot Oil
- General Industrial Fluids
