

DIN1981 Pan Head Self-Tapping Screw

This pan head self-tapping screw conforms to DIN1981 standards. It is designed for creating secure connections in various materials without pre-drilling.

Product Overview

DIN1981 Pan Head Self-Tapping Screw

The DIN1981 Pan Head Self-Tapping Screw is engineered for reliable fastening in industrial applications. Its pan head design offers a generous bearing surface, ensuring a stable and secure connection. Designed to eliminate the need for pre-drilling in compatible materials, this screw is an essential component for machinery assembly and textile equipment maintenance.

Technical Specifications

Standard	DIN1981
Head Type	Pan Head
Fastening Method	Self-Tapping

Applications

Primary Applications	Machinery, Industrial Parts, Apparel Machinery, Textile Machinery
----------------------	---

Performance Features

Key Features

- Large bearing surface for flush connection
- No pre-drilling required in suitable materials
- High stability for industrial fastening
