

DIN82101 Standard Lifting Shackle

This high-strength shackle is manufactured according to DIN82101 standards for heavy-duty lifting. It is constructed from durable materials, offering reliable performance and corrosion resistance for marine and industrial applications.

Overview

DIN82101 Standard Lifting Shackle

This high-strength shackle is manufactured in strict accordance with DIN82101 standards to ensure safety and reliability in heavy-duty rigging applications. Designed for use in both marine and industrial environments, the shackle offers superior durability and corrosion resistance. It features a robust pin design for secure fastening, making it an essential component for connecting chains, ropes, and various rigging hardware.

Technical Specifications

Key Features

- Robust pin mechanism for secure fastening
- High corrosion resistance
- Engineered for reliability in harsh environments

Compliance Standard	DIN 82101
Application Areas	Marine, Industrial, Heavy-duty Lifting, Rigging
