Overview

Compact and Portable Power

This direct-drive air compressor is engineered for efficiency and reliability in a compact, portable form factor. It is specifically designed to operate under pressures up to 0.08 MPa, making it an ideal solution for a variety of tasks including family decoration, high-altitude work, and cable maintenance. With a durable pump and motor assembly, it provides consistent performance for inflation and power tool applications.

Technical Specifications

Maximum Pressure	0.08 Mpa
Drive Mechanism	Direct Drive

Safety & Maintenance

Recommended Maintenance

- Drain water from the tank after every use
- Keep the compressor clean
- Check air filter regularly
- Keep the compressor lubricated
- Use only recommended oil
- Store in a dry place
- Check air hose for leaks or damage before each use

Safety Features	Safety Valve, Thermal Overload Protection, Pressure Gauges, Pressure Regulator
