

Directional Communication Antenna

This directional antenna is designed for enhanced signal reception and transmission. The antenna focuses signal strength for improved performance in specific directions and features a durable construction for reliable operation in various environmental conditions.

Product Overview

High-Performance Directional Antenna

This directional communication antenna (Model WS-101) is engineered for superior signal reception, supporting both analog and digital TV signals as well as DAB/FM radio. Designed for versatility and durability, it features a built-in high-gain, low-noise amplifier and is encased in a waterproof, anti-UV housing. Whether for stationary installation or mobile use in environments like boating or camping, this antenna provides a reliable solution for minimizing interference and maximizing signal coverage.

Technical Specifications

Signal Compatibility

- Analog TV
- Digital TV (HDTV)
- DAB Radio
- FM Radio

Model Number	WS-101
Power Input	AC Input, DC Input

Features & Durability

Durability

Waterproof • Anti-UV Coating • Shielded

Amplifier	Built-in high gain and low noise
-----------	----------------------------------

Usage

Usage Scenarios

- Mobile use
- Camping
- Boating
