

Directional Control Valve

This directional control valve is designed for fluid power systems. It is suitable for applications requiring precise flow control and directional changes.

Overview

Industrial Directional Control Valves

This series of directional control valves is designed for high-performance fluid power systems, offering reliable flow regulation for pneumatic and hydraulic applications. Available in various configurations including solenoid, mechanical, and manual hand-operated models, these valves are engineered for durability and precise operation. They are suitable for demanding industrial environments where robust control of fluid direction and pressure is required.

Technical Specifications

Operating Pressure Range

0.15 MPa

Minimum Pressure

0.8 MPa

Maximum Pressure

Available Valve Types

- Solenoid Valve
- Hand Valve
- Slide Valve
- Air Control Valve
- Mechanical Valve
- Quick Exhaust Valve
- Safety Valve

Model Identifier

4H310-10

Construction

Build Materials

Aluminum, Steel, Brass
