

Disc Harrow

This disc harrow is a versatile implement for soil preparation and tillage. It features adjustable discs and a robust steel frame for durability in demanding field conditions.

Product Overview

1BZ Series Disc Harrow

The 1BZ series disc harrow is a versatile agricultural implement engineered for superior soil preparation and tillage. Constructed with a high-strength steel frame, it is built to withstand demanding field conditions while providing consistent performance. Its adjustable disc angles and depth control allow for precise soil penetration and residue management, making it an essential tool for effective seedbed preparation and crop establishment.

Technical Specifications

Frame Material	High-strength steel
Attachment Method	Three-point hitch
Adjustable Components	Disc Angle, Tillage Depth

Key Features

Performance Highlights

- Heavy-duty bearings for smooth rotation
- Customizable cutting and mixing action
- Effective clod breaking
- Organic matter incorporation
- Soil surface leveling

Primary Applications

Soil Preparation • Tillage • Seedbed Preparation
