

Dishwasher Circulation Pump Motor

This dishwasher motor is engineered for efficient water circulation and drainage. It features a durable pump housing and a powerful electric motor.

Product Overview

XD Series Circulation Pump Motor

The XD Series dishwasher motor is a high-performance component engineered specifically for efficient water circulation and reliable drainage. Featuring robust construction and a durable pump housing, this motor is designed to ensure optimal dishwasher performance over long-term operation. It comes equipped with standard inlet and outlet ports, facilitating seamless integration into various dishwasher plumbing systems.

Technical Specifications

Series	XD Series
Primary Applications	Dishwasher, Water Circulation, Drainage

Features

Design Highlights

- Robust motor construction
- Durable pump housing
- Integrated inlet and outlet ports
