

Dishwasher Disinfecting System

This apparatus combines dishwashing and disinfecting functions in one system. It is designed for household kitchen appliances and features a motor assembly with a solenoid valve.

Product Overview

Dishwasher Disinfecting System

This high-performance disinfecting apparatus is engineered for integration into residential dishwasher units to ensure optimal sanitation. The system features a robust metal motor housing designed for durability and efficient heat dissipation, coupled with a precision solenoid valve for controlled fluid management. Its integrated white plastic manifold includes multiple ports, facilitating seamless water distribution and drainage within the appliance.

Technical Specifications

Core Components

- Motor Assembly
- Solenoid Valve
- Multi-port Manifold
- Electrical Connectors

Application

Household Appliance • Dishwasher Integration

Primary Functions

- Water Distribution
- Fluid Flow Control
- Sanitation/Disinfection

Construction Materials

Metal Motor Housing, White Plastic Manifold
