

DJ170F Engine

The DJ170F is a robust engine designed for various applications. It features durable construction and efficient performance, delivering consistent power and long-lasting operation.

Overview

Engine Overview

The DJ170F is a robust and reliable engine engineered for diverse industrial and agricultural applications. It features a high-performance combustion chamber and an optimized cooling system to ensure consistent power delivery and long-lasting operation. Its compact, user-friendly design allows for seamless integration into equipment such as generators and water pumps.

Technical Specifications

Model Identifier	170F
Primary Applications	Generators, Water Pumps, Industrial Equipment, Agricultural Machinery

Features

Key Performance Features

- High-performance combustion chamber
- Optimized cooling system
- User-friendly control interface
- Compact, integrated design
- Durable construction
