

DN 50-600 Manual Knife Gate Valve

This knife gate valve is designed for industrial applications requiring reliable shut-off. The valve features a robust construction with a stainless steel gate and body, ensuring corrosion resistance and long service life.

Product Overview

Manual Knife Gate Valve

This manual knife gate valve is engineered for industrial fluid control, specifically designed to handle challenging media such as slurries and viscous fluids. Featuring a robust construction, it ensures reliable shut-off performance in demanding environments. With a size range of DN 50-600, this valve provides a versatile solution for various piping system requirements.
