

DN50-DN300 Carbon Steel Pipe Clamp

This pipe clamp is made from common carbon steel Q235 with a zinc coating for corrosion resistance. It is designed to meet EN877 standards and fits pipes ranging from DN50 to DN300 in size.

Product Overview

Robust Pipe Retention System

The Kombi-Kralle, also known as a Record Kralle or Grip Collar, is a specialized clamping solution engineered for SML sewer pipe systems. Designed without a rubber gasket, this clamp utilizes a four-bolt mechanism and a toothed inner surface to ensure a secure, high-friction grip. It effectively prevents axial movement and protects against backpressure, making it an essential component for maintaining the integrity of industrial and commercial plumbing installations.

Technical Specifications

Available Sizes (DN)

- DN50
- DN75
- DN100
- DN125
- DN150
- DN200
- DN300

Design Features

Four-Bolt Design • Toothed Inner Surface • No Rubber Gasket • Axial Movement Protection

Material Composition

Carbon Steel Q235, Zinc Coating, Stainless Steel

Application

Primary Applications

Top-mounted clamp for SML sewer pipes to prevent axial movement and backpressure.
