

Dockyard Construction Cranes

These cranes are built for engineering quality and are used in dockyard construction. They facilitate the lifting and placement of heavy materials and equipment at waterfront construction sites.

Overview

Dockyard Construction Crane System

This dockyard construction crane system is engineered for heavy-duty industrial environments. It features a robust structural platform and integrated balance room, designed to support demanding port operations. The system includes specialized grabbing and hanging equipment, ensuring high-capacity performance for large-scale logistics and construction tasks.

Technical Specifications

Grab Capacity

5 T

Grab Capacity

Fixed Platform Capacity

50 T
