

Dot Matrix LED Display Module

This dot matrix LED display module is designed for creating dynamic displays. It supports both single and double color configurations and is suitable for information panels, advertising displays, and other visual communication applications.

Overview

Versatile Dot Matrix LED Module

This dot matrix LED display module is engineered for dynamic visual communication, supporting both single and double color configurations. With a robust 64x32 pixel resolution and a 4.75mm pixel pitch, it offers a balanced display density suitable for information panels and advertising displays. Designed for integration into larger systems, this module provides the flexibility required for displaying clear text, graphics, and animations.

Technical Specifications

Module Size	304 mm
Module Height	152 mm
Pixel Pitch	4.75 mm
Resolution	64x32 pixels
Pixel Density	44310 dots/sqm

Performance

Brightness

400 cd/sqm

Brightness

LED Arrangement	1R1G
