

Double Disc Plastic Winding Machine

This double-disc winding machine is designed for efficient winding of plastic materials. It features dual winding discs for increased productivity and precise tension control for consistent winding quality.

Overview

High-Efficiency Double Disc Winding

The Double Disc Plastic Winding Machine is engineered for the high-speed, consistent winding of various plastic films and sheets. Featuring a robust frame construction and dual-disc configuration, it significantly enhances operational productivity. Precise tension control systems ensure uniform winding quality, making it an ideal solution for demanding industrial plastic processing applications.

Technical Specifications

Suitable Materials

- Plastic Films
- Plastic Sheets

Machine Type	Double-Disc Winding Machine
Key Features	Robust Frame, Dual Winding Discs, Precise Tension Control

Performance

Productivity Metrics

2 units

Winding Discs
