

Double Drum Road Roller

This double drum road roller is a heavy-duty construction machine designed for compacting asphalt, soil, and other materials. It features two large, smooth drums that provide uniform compaction and a comfortable operator cabin for enhanced productivity.

Overview

Heavy-Duty Compaction Performance

This double drum road roller is engineered for demanding road construction and maintenance projects. Featuring two large, smooth drums, it delivers uniform compaction across asphalt, soil, and various site materials. Designed with a focus on operator productivity and robust performance, this machine is an ideal solution for efficient paving and site preparation.

Technical Specifications

Model Designation	603T / 604T
Machine Type	Double Drum Road Roller

Key Features

Operator Environment

- Comfortable operator cabin
- Enhanced productivity design
- Ergonomic controls

Primary Applications	Asphalt Compaction, Soil Compaction, Road Construction, Site Preparation
----------------------	--

Performance Metrics

Compaction System

2 units

Drum Count
