

Double Head Plastic Profile Cutting Machine

This double-head cutting machine is designed for accurate cutting of plastic profiles. It features adjustable cutting angles, a pneumatic clamping system, and a robust frame for stability and durability.

Overview

High-Precision Profile Processing

This double-head cutting machine is engineered specifically for high-precision processing of plastic profiles. It features a robust frame design to ensure stability during high-volume operations, delivering consistent and clean cuts every time. Equipped with an advanced pneumatic clamping system and adjustable cutting angles, it is an ideal solution for professional manufacturing environments seeking efficiency and reliability.

Technical Specifications

Cutting Capabilities

- Adjustable cutting angles
- High-precision cutting
- Clean edge finish

Machine Configuration	Double Head Cutting Machine
Application	Plastic Profiles
Clamping Mechanism	Pneumatic
