

# Double Layer Four-Roll Plastic Bag Making Machine

This double-layer bag making machine is designed for efficient, high-volume production. It features multiple rollers for smooth material feeding, precise cutting and sealing, and an intuitive control panel.

## Product Overview

### High-Efficiency Bag Production

This double-layer, four-roll bag making machine is engineered for the simultaneous production of HDPE and LDPE flat bags, garbage bags, and vest bags. It features advanced controls including a stepper motor, frequency control, and electro-optical tracking for precise length management. Designed for industrial environments, this equipment offers high-volume output with consistent quality and reliable performance.

## Technical Specifications

### Production Speed

**160 pcs/min**  
Max Speed

### Bag Dimensions

Metric	Value
Single Roll Max Width	860 mm
Four Roll Max Width	400 mm
Bag Length	30-1000 mm

Model	HBD-900
Film Thickness	0.06 mm
Precision Error	±1mm

## Machine Configuration

Control Features	Stepper motor, LCD Screen operation, Frequency Control, Electro-optical tracking
------------------	--

## Physical Attributes

Total Power	7 kw
Total Weight	1500 kgs
Machine Dimensions (L*W*H)	3500*1600*1700 mm
