

Double Point Straight Side Press

This double point straight side press is engineered for high-performance metal forming applications. It features a robust frame construction ensuring stability and precision during operation.

Overview

High-Performance Double Point Press

This double point straight side press is engineered for demanding metal forming applications. Featuring a robust welded steel frame column structure, the machine ensures exceptional rigidity, high strength, and stability during operation. Designed for precision and reliability, it serves as a foundational tool for a wide range of industrial metalworking tasks.

Technical Specifications

Rated Pressing Force

160 Tons
Pressing Force

Frame Construction	Welded steel frame column structure
Structural Benefits	High Strength, High Stability, Precision
Model Identifier	JM36-160
