

Double Rod Pneumatic Cylinder

This pneumatic cylinder has a compact design with a silver body and black end caps. Featuring a rod extending from both ends, it is suitable for various automation and industrial applications.

Product Overview

V Series Double Rod Pneumatic Cylinder

The V Series double rod pneumatic cylinder is engineered for precision linear motion and consistent force exertion in demanding industrial environments. Featuring a robust, compact design with high-quality end caps, this component is ideal for integration into robotics, automated assembly lines, and mechanical systems. Its dual-rod configuration provides enhanced stability and versatility for diverse automation tasks.

Technical Details

Available Models

- VQC 83/15/30
- VQC 83/15/15
- VQC 40/15/30A

Configuration

Double Rod, Compact, Linear Motion
