

# Double Row Automotive Ball Bearing

This high-performance double row ball bearing is designed for automotive applications. It offers exceptional load capacity and durability, ensuring smooth and reliable operation.

## Product Overview

### High-Performance Automotive Bearing

This double row ball bearing is precision-engineered for demanding automotive applications. Designed for exceptional load capacity and durability, it ensures smooth operation even under significant stress. Its high-quality construction minimizes friction, contributing to an extended service life and reliable performance in various automotive key parts and aftermarket service scenarios.

## Technical Specifications

|                       |   |
|-----------------------|---|
| Bearing Type          | Double Row Ball Bearing                                 |
| Suitable Applications | Automotive, Aftermarket Service, High-Load Environments |

## Performance Features

### Key Performance Metrics

**2 rows**  
Row Count

### Operational Benefits

- Exceptional load capacity
- Reduced friction operation
- Extended service life
- High-quality material construction
