

Downdraft Induction Cooktop with Integrated Ventilation

This downdraft induction cooktop integrates cooking zones with a central downdraft ventilation system. It features touch controls, digital readouts, and safety features for modern kitchens.

Overview

Integrated Performance

This advanced downdraft induction cooktop seamlessly combines high-efficiency ventilation with precision induction cooking. Designed for modern kitchens, the unit features a durable ceramic glass surface and an integrated downdraft hood capable of 800m³/hr airflow. It offers a sophisticated cooking experience with flexible zones, intuitive touch controls, and comprehensive safety features to ensure a clean and efficient culinary environment.

Ventilation System

Airflow Capacity

800 m³/hr

Airflow

Filter Type

Washable aluminum grease filters
