

DPN Miniature Circuit Breaker

This DPN miniature circuit breaker provides both thermal and electromagnetic overcurrent protection. It features a DIN rail latch with a double fixed position and a wide engagement lever.

Overview

DPN Miniature Circuit Breaker

The DAB7N-40 Series miniature circuit breaker features a double-break point 1P+N design, where poles are insulated and isolated from each other. During synchronous operation, the neutral pole is engineered to make first and break last, ensuring optimal electric arc breaking capacity for the protected pole. This design provides enhanced safety for both controlled circuits and connected electrical equipment in residential, commercial, and industrial environments.

Technical Specifications

Tripping Characteristic	C15
Pole Configuration	1P+N
Mounting Type	DIN Rail

Compliance & Quality

Certifications	ISO9001, CE, CB, RoHS
Standards Compliance	IEC
