

Drainage System Construction

This project involves the construction of a comprehensive drainage system. It includes a network of concrete structures and earthworks to manage water flow.

Project Overview

Comprehensive Drainage Infrastructure

This drainage system construction project demonstrates professional planning and execution of complex water management networks for residential developments. The infrastructure includes a robust network of concrete structures and earthworks designed to ensure efficient site drainage. The project showcases high-level engineering and the use of heavy machinery to deliver reliable long-term drainage solutions.

Project Details

Construction Category

Drainage Infrastructure • Civil Engineering • Earthworks

Project Site

Yinhe Holiday Villa

Technical Scope

Infrastructure Components

- Concrete drainage structures
- Complex network planning
- Site earthworks
- Heavy machinery integration

Project Status

Active Construction Phase

Site Characteristics

Bird's-eye view planning, Network development, Professional execution
