

Drive-In/Drive-Thru Pallet Racking System

The drive-in/drive-thru racking system maximizes space in warehouses and distribution centers. Forklifts drive directly into the rack to load or retrieve pallets.

Product Overview

High-Density Storage Solutions

The Drive-In/Drive-Thru Pallet Racking System is a heavy-duty solution designed to maximize warehouse space utilization by up to 85%. By allowing forklifts to drive directly into the rack structure, it reduces overall square footage requirements by 35% or more compared to standard configurations. This system is ideal for high-density storage of large stocks with relatively few product types, particularly in cold storage or food processing environments.

System Configurations

Inventory Management Options

System Type	Access Method	Workflow
Drive-In	Single-sided access	First In, Last Out (FILO/LIFO)
Drive-Thru	Dual-sided access	First In, First Out (FIFO)

Construction & Quality

Surface Finish

- Immersion chemical cleaning
- Durable powder coating

Material

High-strength heavy-duty steel

Manufacturing Standards

ISO Certified, AWS Standards, Robotic Welding

Structural Components

Key Components

- Vertical upright frames
- Horizontal support arms
- Pallet rails

Applications

Target Industries

Cold Storage • Food Processing • Distribution Centers • Homogenous Product Storage

Customization

Customization Potential

Yes
