

Drum Brake Shoes with Friction Material

These brake shoes are designed for drum brake systems. The curved friction material is bonded to a metal backing plate to provide stopping power and durability.

Product Overview

High-Performance Drum Brake Shoes

These drum brake shoes are engineered for reliable stopping power and long-term durability in demanding automotive applications. Featuring a high-strength steel backing plate, they resist deformation even under intense braking forces. The design includes precision-engineered slots and chamfers to minimize noise and vibration, ensuring a smoother braking experience and consistent performance.

Technical Construction

Backing Plate Material	High-strength steel
Noise Reduction Features	Slots, Chamfers

Maintenance

Maintenance Features
Wear Indicator Included

Installation	Designed for easy installation and precise fitment within the brake drum assembly.
