

Dry Mortar Powder Blender

This dry mortar blender ensures uniform mixing of dry powder, accommodating a range of liquid additives. It is widely applicable in powder coating, insulation mortar, and putty powder preparation.

Product Overview

Efficient Dry Mortar Mixing Solution

This horizontal dry mortar blender is engineered for high-efficiency mixing of dry powder construction materials. It utilizes a robust cylindrical chamber equipped with internal paddles or ribbons to ensure a thorough and homogeneous blend for every batch. Designed with a sturdy steel frame, this system prioritizes durability, low-cost operation, and ease of maintenance for professional construction environments.

Technical Specifications

Mixing Mechanism	Horizontal cylindrical chamber with internal paddles/ribbons
Build Material	Sturdy steel frame

Operational Features

Feeding Method

- Top-mounted inlet
- Screw conveyor feeder

Discharge Method	Bottom outlet
------------------	---------------

Key Benefits

Operational Advantages	Low-cost operation, Easy maintenance, Homogeneous blending, Durable construction
