

Dry-Type Sand Shaping and Making Equipment

This dry-type system uses mine rocks and gravel tailings as raw materials. It integrates a vertical-shaft impact crusher, vibrating screen, dust collection module, and transmission module for clean production.

Product Overview

Industrial Sand Shaping and Making Solution

The S3 Series is a high-performance dry-type solution engineered for efficient aggregate processing and sand production. By integrating multi-stage crushing and screening, the system delivers consistent particle sizes while eliminating the need for water, making it ideal for arid climates. Its robust construction and advanced control systems ensure high productivity and minimal downtime for demanding industrial applications.

Technical Specifications

Integrated Components

- Primary crusher
- Secondary crusher
- Vibrating screen
- Sand making unit

Operational Method

Dry-type shaping and sand making

Features

Equipment Advantages

Water-free operation, Advanced control system, Multi-stage processing, High durability, Consistent output

Application

Primary Applications

Construction • Aggregate Production • Industrial Processing
