

Dual-Axis Solar Tracker

This dual-axis solar tracker maximizes solar energy capture. The system automatically adjusts its orientation in two axes to follow the sun's movement throughout the day, ensuring optimal sunlight exposure for the attached solar panels.

Overview

Maximize Energy Yield

The Dual-Axis Solar Tracker is an advanced mounting solution engineered to maximize solar energy capture by automatically adjusting orientation across two axes. By continuously tracking the sun's movement throughout the day, the system ensures optimal sunlight exposure for attached photovoltaic panels. This technology is highly effective for residential, commercial, and industrial applications looking to significantly enhance the efficiency and output of their solar energy systems.

Technical Specifications

Core Benefit

Maximized Energy Capture • Automated Adjustment

Tracking Capability	Dual-Axis
Suitable Applications	Residential, Commercial, Industrial
