

Dual Cage Construction Hoist

This construction hoist provides vertical transportation for personnel and materials on construction sites. Its dual-cage configuration enhances efficiency by enabling simultaneous upward and downward movement.

Overview

Dual Cage Construction Hoist

The SC200/200 construction hoist is a high-efficiency vertical transportation solution designed for personnel and material handling on demanding construction sites. Featuring a robust dual-cage configuration, it allows for simultaneous upward and downward movement to maximize operational throughput. Built for high-rise buildings and bridge projects, this hoist integrates essential safety mechanisms, including overload protection and emergency stop systems, to ensure reliable performance during vertical lifting operations.

Performance Metrics

Payload Capacity

2 t

Payload per Cage

Passenger Capacity	20 persons/cage
Max Lifting Height	250 m
Rated Lifting Speed	39 m/min

Technical Specifications

Configuration	Double Cage
Safety Features	Emergency Stop, Overload Protection, Robust Steel Structure
