

Dual Cavity Rectangular Plastic Tubing

This rectangular plastic tubing features two internal cavities. It is suitable for structural applications, cable management, or other uses where enclosed channels are needed.

Product Overview

Dual Cavity Structural Tubing

This dual cavity rectangular plastic tubing is engineered for versatility in structural and cable management applications. Featuring a robust, dual-channel internal design, it provides organized routing paths for cables or conduits while maintaining high structural integrity. With its smooth, glossy finish, this tubing is suitable for professional-grade installations requiring both durability and a clean, aesthetic appearance.
