

# Dual-Channel Wireless Microphone System with IR Synchronization

This dual-channel wireless microphone system features infrared (IR) synchronization for easy setup. It operates on UHF with PLL and offers 200 channels for reliable audio transmission.

## Product Overview

### Professional Wireless Audio Performance

This dual-channel UHF wireless microphone system is engineered for reliable audio capture in diverse environments, ranging from KTV performances to outdoor events. Featuring PLL technology and infrared (IR) synchronization, it offers 200 selectable channels to ensure stable, interference-free operation. Designed with durable metal handheld microphones, the system delivers high-quality sound across a broad frequency response range for consistent professional output.

## Technical Specifications

### Frequency Response

**80 Hz**

Lower Limit

**18 kHz**

Upper Limit

Frequency Range	620-950MHz
Operating Range	60 m

## System Features

### Build Material

Metal Handheld Microphones

Total Channels	200
Synchronization	IR Synchronization, PLL Technology
Power Requirements	1.5V x 2 Batteries per microphone

## Applications

### Recommended Uses

- KTV Performances
- Family Amusement
- Outdoor Activities
