

Dual Fuel Generator (LPG/Gasoline)

This dual fuel generator can operate using either LPG or gasoline. It delivers 12000 starting watts and 9000 running watts when using gasoline, and 10800 starting watts and 8100 running watts when using LPG.

Overview

Dual Fuel Versatility

This dual-fuel generator offers the flexibility to operate on either gasoline or LPG, providing a reliable and convenient power solution for both home and professional applications. Engineered for performance, it features a unique square motor design that enhances heat emission and ventilation, resulting in a 5% to 10% improvement in power output. With its user-friendly side plate LPG intake structure, switching between fuel sources is seamless and efficient.

Performance Metrics

Gasoline Performance

12000 W
Starting Watts

9000 W
Running Watts

LPG Performance

10800 W
Starting Watts

8100 W
Running Watts

Technical Features

Design Advantages

- Double air inlet filter
- Square motor design
- Enhanced heat emission
- Side plate LPG intake control
