

Dual Fuel Natural Gas Generator

This gas generator is designed for efficient power generation using natural gas or dual fuel options. It features a robust engine and advanced control systems for reliable operation.

Product Overview

High-Performance Power Generation

This dual fuel natural gas generator is engineered with high-strength engine technology, offering a balance of high power output and compact design. It features advanced electric control systems that enable lean combustion, enhancing efficiency while reducing heat load. Designed for reliability and longevity, this unit is suitable for various industrial and commercial power generation needs.

Performance & Efficiency

Key Benefits

Lean combustion, High electrical efficiency, Low noise, Compact design, Light weight, Long service life

Technical Specifications

Compatible Gas Sources

- Natural Gas
- Coal Mine Gas
- Coal Gas
- Methane
- Other combustible gases

Control System Components

- Intelligent ignition system
- High energy spark plug
- Gas flow injection valve
- Electronic speed control system
- Digital integrate throttle valve
- Venturi mixer

Configuration Options

Box type power plant • Dual fuel capability
